No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

The library is named RPCI-98 and was constructed by partial EcoRI digestion of Drosophila DNA provided by the BDGP from the isogenic strain y2; on bw sp, the same strain used for the BDGP's Pl and EST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.	- Web: www.genoscope.cnb.ii) Determination of this BAC-end sequence was carried out as part of a collaboration with the Berkeley Drosophila Genome Project (BDGP). The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.friifflv.org.The BDGP Drosophila	Ephydroidea; Drosophilidae; Drosophila. 1 (bases 1 to 1101) 1 (bases 1 to 1101) 1 (bases 1 to 1101) 1 (bases 1 to 1101) 2 (bases 1 to 1101) 2 (bases 1 to 1101) 2 (bases 1 to 1101) 2 (bases 1 to 1101) 2 (bases 1 to 1101) 2 (bases 1 to 1101) 3 (bases 1 to 1101) 3 (bases 1 to 1101) 3 (bases 1 to 1101) 4 (bases 1 to 1101) 5 (bases 1 to 1101) 5 (bases 1 to 1101) 5 (bases 1 to 1101) 5 (bases 1 to 1101) 6 (bases 1	AL063921.1 GI:4941778 AL063921.1 GI:4941778 GSS. Determination of this BAC-end sequence was carried out as part of a collaboration with the European Drosophila Genome Project (EDGP) - http://www.edgp.ebi.ac.uk - This Drosophila melanogaster BAC library (Dros BAC) was made by Alain Billaud at CEPH (Centre d'Etude du Polymorphisme Humain) with funding provided by a MRC project grant. The DNA was prepared from embryos by Alain Bucheton and Genevieve Payan. It has been constructed in the vector
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    7
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Drosophila melanogaster (fruit fly)

Determination of this BAC-end sequence was carried out as part of (collaboration with the European Drosophila Genome Project (EDGP)-http://www.edgp.ebi.ac.uk - This Drosophila melanogaster BAC library (Dros BAC) was made by Alain Billaud at CEPH (Centre d'Etude du Polymorphisme Humain) with funding provided by a MRC project grant. The DNA was prepared from embryos by Alain Bucheton and Genevieve Payan. It has been constructed in the vector
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            83

1st strand cDNA was primed with a NotI-oligo(dT) primer. Five prime
end enriched, double-strand cDNA was digested with Not I and cloned
into the Not I and EcoRV sites of the pcMVSPRT 6 vector. Library
was not normalized. Library was constructed by Life Technologies, a
division of Invitrogen.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Li, W.B., Gruber, C., Jessee, J. and Polayes, D.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            frequency of vectors containing inserts is 96% as determined by digestion check after picking 20 clones, miniprep and subsequent digestion with Not I and Sal I. f.A low level of 32P was used in the cDNA synthesis procedure. The level measured by holding a Geiger Counternext to a plate was background."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             a.1st strand cDNA was primed with a Not I primer-adapter (5' -pGACTAGTTCTAGATTGGCGAGCGGCCCC(T)15-3')
b.Double-stranded cDNA was ligated to Sal I adapter, digested with Not I and cloned into the pSPORT 1-vector pre-cut with Not I and Sal I. c.The ligation mix was transformed into DH108 cells. d.The picked clones were grown up in the 384-plate containing the freezing medium (LB-Medium containing 4 % glycerol w/v, and different salts) (antibiotic is carbenicillin 100ug/ml). e.The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            /lab host="ElectroMAX DH10B cells, Invitrogen"

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Conservative
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  / CIUME ILLE HYULG EST OLL 5 AME
/ NOTE "Wector: pSPORT; Site 1: Not I; Site 2: Sal I;
a.1st strand cDNA was primed with a Not I primer-adapter
(5' -pGACTAGTTCTAGATCGCGAGCGGCCCC(T)15-3')
b.Double-stranded cDNA was ligated to Sal I adapter,
digested with Not I and cloned into the pSPORT 1-vector
pre-cut with Not I and sal I. c.The ligation mix was
transformed into DH10B cells. d.The picked clones were
grown up in the 384 plate containing the freezing medium
(LB-Medium containing 4 % glycerol w/v, and different
salts) (antibiotic is carbenicillin 100ug/ml). e.The
frequency of vectors containing inserts is 96% as
determined by digestion check after picking 20 clones,
miniprep and subsequent digestion with Not I and Sal I.
f.A low level of 32P was used in the cDNA synthesis
procedure. The level measured by holding a Geiger Counter
next to a plate was background."

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Separate CDNAs were generated using primers that incorporated unique 5' and 3' tags to distinguish each source of RNA. CDNAs were then pooled, size-fractionated, directionally cloned into a custom medium-copy vector and transformations made with four size classes to minimize size bias. Details of each source of RNA and library
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  construction can be obtained at http://cgpdb.ucdavis.edu/ TAG_SEQ=Not found"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              /clone_lib="QG_ABCDI lettuce salinas"
/note="Vector: pBRcDNASfiAB; The library was constructed
from 10 different sources of RNA from a single genotype.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      /lab_host="E.coli"

No. is the number of results predicted by chance to have
score greater than or equal to the score of the result being predicted by analysis of the total score distribution.

The pgsBCA gene complex comprises the pgsB, pgsB and pgsA genes and is normally expressed in the outer membrane of Bacillus subtilis. The vector can be transformed into either Gram-positive or Gram negative bacteria (e.g., Escherichia coli), and can be used for the surface expression of various proteins of interest such as enzymes, antigens, antibodies, attachment proteins or adsorption proteins. Proteins recombinantly produced using the vector of the invention can be used as, for example, vaccines or enzymes. The present sequence represents the Bacillus subtilis pgsBCA complex gene pgsA, which is specifically claimed for use in the vector of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence 1140 BP; 381 A; 235 C; 265 G; 259

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          문
                                                The present invention relates to a vector for preparing a vaccine which contains one or more than two genes, i.e. pgs A-C encoding poly-X-glutamate synthetase complex and an antigen protein gene of human papilloma virus. The vector and microbes transformed with it are useful in preparing vaccines for treating or preventing mucosal tumour, e.g. cervical cancer. The present sequence is a Bacillus subtilis poly-X-glutamate synthetase complex coding sequence.
                                                                                                                                                                                                                                                                                                                                     New vector containing pgs A-C genes encoding poly-gamma-glutamate synthetase complex and an antigen protein gene of human papilloma virus, useful in preparing vaccine for treating or preventing mucosal tumor, e.g. cervical cancer.

                                                                                                                                                                                                                                                                                                                                                                 The invention relates to a novel method for surface expression of peptides P5 and Anal3 using a poly-gamma-glutamic acid synthase (pgs) BCA gene, thereby removing a purification process of peptides P5 and Anal3, and using lactic acid bacteria for the surface expression, so that peptide antibiotics can be cheaply and stably mass-produced. An expression vector pHCEILB:pgsA-P5 comprises one or more genes encoding poly-gamma-glutamic acid synthase selected from pgsB, pgsC and pgsA, and a gene for dipolar peptide antibiotics having antimicrobial, antifungal and anticancer activities, wherein the dipolar peptide antibiotic has homology to the peptide P5 encoded by the nucleotide sequence set forth in ADV65737. The present sequence represents the B. subtilis poly-gamma-glutamic acid synthase A gene used in the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Boo HR,

New expression vector containing gene(s) that encode a poly-gamma-glutamate synthetase complex, useful for producing proteins (e.g. vaccines or enzymes) on the microbial surface of Gram-positive and/or Gram-negative bacteria.

Example ۲, 122pp; English

The invention relates to a vector for expression of a target protein on a microbial cell surface. The vector of the invention comprises either one or more than two genes of the Bacillus subtilis poly-gamma-glutamate synthetase complex (pysBCA) to facilitate microbial surface expression of the target protein. The pgsBCA gene complex comprises the pgsB, pgsB and pgsA genes and is normally expressed in the outer membrane of Bacillus subtilis. The vector can be transformed into either Gram-positive or Gram-negative bacteria (e.g., Escherichia coll), and can be used for the surface expression of various proteins of interest such as enzymes, antigens, antibodies, attachment proteins of interest such as enzymes, antigens, antibodies, attachment proteins or adsorption proteins. Proteins recombinantly produced using the vector of the invention can be used as, for example, vaccines or enzymes. The present sequence represents a microbial cell surface expression vector of the invention,

A plasmid comprising the present sequence may be used to transform Escherichia coli. The transformants express the enzyme and PGA is produced in the culture

PT New nucleic acid encoding a glutamate racemase enzyme useful for the PT preparation of poly-gamma-glutamic acid.
```

Claim 1; Page 7-11; 17pp; Japanese.

The present sequence encodes a glutamate racemase enzyme which is useful in the production of poly-gamma-L-glutamic acid (L-PGA) or poly-gamma-D,L-glutamic acid (PGA). A plasmid comprising the present sequence may be used to transform Escherichia coli. The transformants express the enzyme and PGA is produced in the culture

The invention describes a method of monitoring differential expression of genes in a first Bacillus cell relative to expression of the genes in other Bacillus cells, comprising hybridising labelled nucleic acid probes isolated from Bacillus cells to a substrate containing array of Bacillus genomic sequenced tags (GST), examining the array, and determining relative gene expression by an observed hybridisation reporter signal of a spot in the array. The method is useful for measuring the expression of genes in a first Bacillus cell relative to expression of the same genes in one or more second Bacillus cells. The method is useful for monitoring global expression of several genes from a Bacillus cell, discovering new genes, identifying possible functions of unknown open reading frames and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  monitoring gene copy number variation and stability. Monitoring changes in expression of genes may be used to provide a representation of the way in which Bacillus cells adapt to changes in culture conditions, environmental stress or other physiological provocation. Extensive follow environmental stress or other physiological provocation is Extensive follow—up characterisation is unnecessary, when one spot on an array equals one gene or one open reading frame, since sequence information is available. This sequence represents a genomic sequence tag (GST) used in the method of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIFO at ftp.wipo.int/pub/published_pct_sequences

                                                                                                                                                                                              g
                                                                                                                                                                                                                                                                                                                                                                                                            The invention describes a method of monitoring differential expression of CC genes in a first Bacillus cell relative to expression of the genes in CC other Bacillus cells, comprising hybridising labelled nucleic acid probes isolated from Bacillus cells to a substrate containing array of Bacillus CC genomic sequenced tags (GST), examining the array, and determining CC relative gene expression by an observed hybridisation reporter signal of CC a spot in the array. The method is useful for measuring the expression of genes in a first Bacillus cell relative to expression of the same genes CC in one or more second Bacillus cells. The method is useful for monitoring CC global expression of several genes from a Bacillus cell, discovering new GC genes, identifying possible functions of unknown open reading frames and CC monitoring gene copy number variation and stability. Monitoring changes in expression of genes may be used to provide a representation of the way CC in which Bacillus cells adapt to changes in culture conditions, CC environmental stress or other physiological provocation. Extensive follow cup characterisation is unnecessary, when one spot on an array equals one gene or one open reading frame, since sequence information is available. CC This sequence represents a genomic sequence tag (GST) used in the method CC of the invention. Note: The sequence data for this patent did not form CC part of the printed specification, but was obtained in electronic format CC directly from WIFO at fig.wipo.int/pub/published_pct_sequences

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                맑
The present invention describes an isolated polynucleotide (I) of Alloiococcus otitidis genomic DNA, which encodes an antigenic protein. Alloiococcus otitidis is a Gram-positive bacterium. Also described: (1) an isolated polypeptide that is encoded by the polynucleotide (I); (2) an expression vector comprising the novel isolated polynucleotide (I), its complement, degenerate variant or fragment; (3) a genetically engineered host cell, transfected, transformed or infected with the vector of (2); (4) an antibody specific for the polypeptide of (1); (5) an immunogenic composition comprising the polypeptide, its complement, biological equivalent or fragment, or the polypeptide, its comprised in the expression vector; (6) a pharmaceutical composition comprising the polypeptide of (1) and a carrier; (7) a protein chip comprising an array
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New Alloiococcus otitidis polynucleotides and polypeptides, treating and diagnosing diseases, drug screening assays and effects during drug clinical trials.
